A Novel, Hierarchically Developed Surface Kinetics for Oxidation and Reforming of Methane and Propane over Rh/Al₂O₃

By Canan Karakaya

Shaker Verlag Okt 2013, 2013. Buch. Book Condition: Neu. 214x149x17 mm. Neuware - This thesis focuses on the development of a surface reaction mechanism for oxidation of H₂ and CO, water-gas shift (WGS) as well as reverse water-gas shift (R-WGS) reactions and partial/total oxidation and steam/dry reforming of methane and propane over Rh/Al₂O₃ catalyst. The study aims at providing a better understanding of the reaction kinetics of synthesis gas production. A stagnation-flow reactor set-up has been developed and constructed to study the reaction kinetics of various gas fuels (e.g., H₂, CO, CH₄, C₂H₆, C₃H₈) and evaporated liquids (e.g., water, ethanol, methanol, iso-octane). The reactor configuration facilitates one-dimensional (1D) modeling of coupled diffusive and convective transport within the gas-phase boundary layer with detailed heterogeneous chemistry model. As a result, well-defined boundary conditions are created, and heat and mass transport effects are eliminated from the kinetic model. Boundary-layer composition profiles of the species are measured by using a micro-probe sampling technique. Gas-phase concentrations of the species are simultaneously analyzed by MS and FTIR. The stagnation disk is coated with a Rh/Al₂O₃ catalyst by spin-spray technique. Light microscopy (LM), scanning electron microscopy (SEM), and transmission electron microscopy (TEM) are applied for the determination...

Reviews

An exceptional publication as well as the font employed was exciting to see. it was actually writtern extremely flawlessly and helpful. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Dominic Collins**

This ebook could be worthy of a read through, and far better than other. I am quite late in start reading this one, but better then never. I realized this publication from my dad and i advised this publication to learn.
